Q&A

Can I use Hyperterimal to access the IQ710?

Q:

Can I use Hyperterimal to access the IQ710?

A:

Yes. In order to access the IQ710 via Hyperterminal you will need to follow the steps below.

1. Verify that you have established a physical connection between the unit's craft port and an available COM port on your PC. You will need a DB9 to DB9 serial cable to make this connection. **Note: the DB9 to DB9 serial cable does not ship with the unit.**
2. Launch Hyperterminal and create a descriptive name for the session.
3. In the "connect using" field select "direct to com x", where "x" is the com port on your PC that has the serial cable connected to it.
4. Modify the port settings to reflect values listed in figure 1. Select OK and press the enter key to bring up the login window.
